Subject: Update

Meeting was held at Bachman Services office yesterday with EPA, ODEQ, City of Oklahoma City and Bachman representatives.

It looks like this incident is winding down.

1. The building has been cleaned out and demolition could begin as soon as Saturday. Miller Environmental is responsible for that operation.
2. Boomer Environmental began hauling off the liquid waste to SW landfill for solidification and disposal at 7am on 8/14/12. Approximately 318,000 gallons were removed that day. They began with 151 frac tanks, so far 26 tanks have been removed. Depending on weather this operation will take 10-14 days.
3. I spoke to Jason Martin this morning and the soil remediation is being done this morning.
4. As soon as the ODEQ Analytical results are received and analyzed a decision will be made when the two earthen dams will be removed. I checked, there was approximately 1284 tons of soil and concrete used to build the dams. A representative from OKC Streets Department should be contacting Jason Martin today. This could happen as soon as Friday or Monday.
5. Sara with ODEQ said that once the soil remediation was completed and the dams were

removed that no further services of ODEQ would be required.

6. Once the tanks have been stabilized and all of the tanks have been removed the City, Bachman and the Indian Cultural Center will meet and discuss final stabilization of the ICC property.

Thanks for everyone's expertise and input,

Raymond L. Melton, CSI, CPESC
